

OneDev

Git server with CI/CD, kanban, and packages. Seamless integration. Unparalleled experience.

Website: <https://onedev.io/>

docker-compose.yml

```
version: "3.7"

services:
  #OneDev
  onedev:
    container_name: onedev
    image: ldev/server
    restart: unless-stopped

    ports:
      - <port1>:6610
      - <port2>:6611

    volumes:
      - /var/run/docker.sock:/var/run/docker.sock
      - data:/opt/onedev

volumes:
  data:
    driver: local
    driver_opts:
```

type: none

o: bind

device: /path/to/onedev/data

replace:

- <port1>: mapped port on your docker system
- <port2>: mapped port on your docker system
- /path/to/onedev/data: the path for your persistent volume with onedev data
